

FIREBASE AND GOOGLE CLOUD PLATFORM(GCP)

O CAN JOHN JOEL.

COURSE NAME: RESEARCH METHODOLOGY

COURSE CODE:BIT2207

REG NUMBER: 16/U/10705/ps.

STUDENT NUMBER: 216009506

March 10, 2018

Firebase helps one to build a better mobile apps and grow the business. Firebase products are backed by Google Cloud platform, letting one to scale his/her app to billions of users.

1 Build apps fast, without managing infrastructure

Firebase gives functionality like analytics, database, messaging and crash reporting so you can move quickly and focus on your users.

2 Backed by google, trusted by top apps

Firebase is built on google infrastructure and scales automatically, for even the largest apps. Firebase products work greatly individually but share data and insights, so they work even better together.

3 products

Firebase and GCP share two products: The cloud function and cloud storage. These are the same products that exist in cloud, simply exposed for client-

server SDKs(Cloud) and the client SDKs (Firebase), so your frontend and backend teams can work in concert.

4 Projects.

Each account can have multiple projects, which are like folders or directories. Both Firebase and GCP products can be added to a project.
